

Ensure a clear and visible identifier even after a perfect paint job.

PAINT PATCH LABELS FOR AUTOMOTIVE PARTS

With Paint Patch labels from Computype, you're ensured visible and scannable labels even after painting.

We understand that in manufacturing and assembly environments component parts can arrive to the painting or powder coating stage having already been bar coded or labeled. You need to apply a perfect coat of paint while maintaining the scannability of the bar code.

The paint patch label was designed specifically for this kind of process. It contains a clear laminate that is easily removed after the paint dries, exposing the original label without complicating your painting process.

Benefits:

ENSURE ACCURACY

With no need to relabel or apply temporary labels for the painting process. The original part identifier remains in-tact and legible throughout the entire process.

SAVE TIME

As there is no need to alter an existing process to account for labeling or painting as the Paint Patch label can accommodate your existing workflow.

GAIN FLEXIBILITY

As the laminate allows for the pristine barcode or label to remain paint-free throughout your process.

INCREASE SPEEDS

With easy removal of laminate for quick accessibility to the label.

Features:

- Harsh environment 3M adhesives ensure the label remains intact throughout your process to properly track each component through your workflow.
- Clear over laminate provides protection from paint and other debris throughout your process and can be easily removed at the end of the line to reveal a pristine, clear, and readable label.
- Easy removal of laminate can be performed even while wearing gloves to promote ease of use.
- Can be custom sized to meet your identification needs.

FORMIDABLE INDUSTRIAL ENVIRONMENT, MEET FORMING A PARTNERSHIP THAT MAKES THE GRADE.

From the production line, to the warehouse, to the road, Computype has the custom solutions to meet the challenges of your industrial environment. For nearly 50 years, we've put our labels and adhesives through endless testing to prove they can withstand the demands of rigorous manufacturing environments.

WE'D LOVE TO HEAR FROM YOU.
